

Digital Water Meter

POWER-SPRAYS

Programmable water quantity, with 'actual' and 'target' display modes

Simple, easy to use controls

Automatic and manual dispensing modes

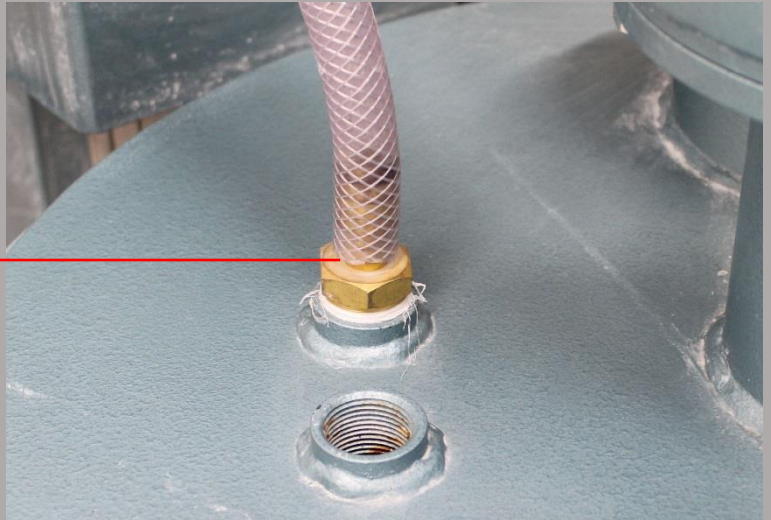

IP66 rated enclosure

The digital water meter is available as a standalone unit, or integrated into a Power-Sprays mixer

Water can be discharged directly into any mixer via a 1/2" I/D hose

Accurate dispensing of the water used in Glass fibre Reinforced Concrete production is vital for quality and consistency of production. Power-Sprays' digital water metering systems enable this with the push of a single button.

The meter can be used in manual and auto modes; in manual mode, an operator simply holds the 'Add Water' button until the required quantity of water has been dispensed. In auto mode, the required quantity can be programmed and is dispensed on demand. The meter automatically stops when the correct amount of water has been dispensed.

Specifications

Dimensions	200mm wide x 300mm high x 155mm deep
Water Inlet Valve	Solenoid activated diaphragm type
Water Inlet	1/2"
Water Outlet	1/2"
